QUESTION

(100 %)

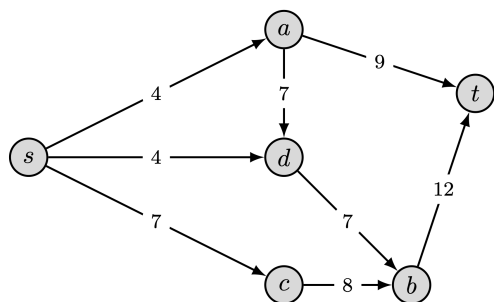

Compute the maximum flow of the following networks.

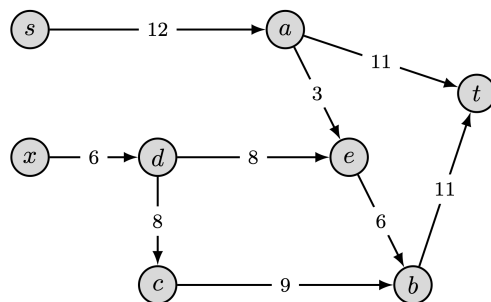

(a)

(b)

(c)

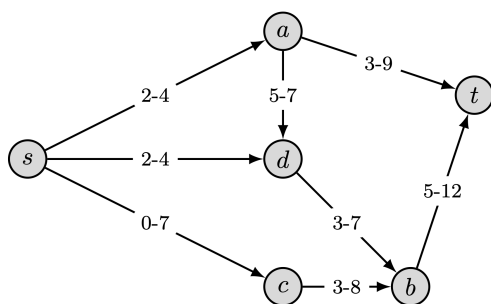

(d)

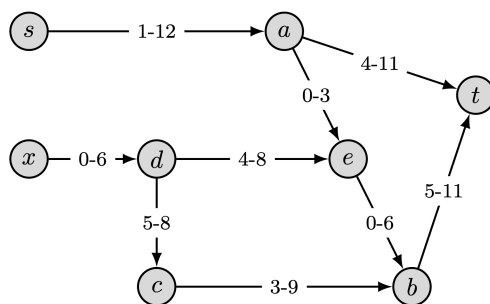

QUESTION

(100 %)

Compute, if possible, the maximum flow of the following networks, however there is a lower flow which has to be met in each edge. In the networks, upper and lower capacities are showed in the following form $l - u$. If there is no possible flow, explain why and adapt the network to make the flow possible.

(a)

(b)
